***itelligence and CompuNet S.A. Partner to Provide myAgri® Services in U.S. and Latin America***

Companies Secure SAP® Certification for Comprehensive Agricultural Industry Solution

**Orlando, May 5, 2008** — itelligence Inc. and CompuNet S.A. announced today a formal partnership to provide myAgri® as a certified SAP® Business All-in-One solution for the agricultural industry. Based and built on the SAP ERP platform, myAgri supports all the key requirements of large, medium and small agricultural enterprises with a powerful, integrated and comprehensive solution.

myAgri is ideal for managing and controlling the growth and transformation processes of agricultural products such as plants, fruits, cereals and vegetables. The agro-business solution offers a complete set of industry specific processes to plan, control and manage the field operations of any agricultural enterprise. In the U.S., myAgri is the only solution of its kind that totally integrates these processes with the rest of the administrative, logistical and financial operations provided by SAP Business All-in-One solutions. Representative capabilities include:

- Ground/Field preparations for planting (sowing)
- Seeding, seed plot control
- Crop (plant/fruit) growth process (plant cultivation)
- Plant/Fruit harvest process
- Third-party growers contracts and accounting
- Field equipment planning and maintenance

The myAgri solution addresses traditional agricultural enterprise pain points, including decentralized field operations, limited business controls and data and deficient process standardization, with a proven, pre-packaged solution that includes future-state business process maps, legacy data migration templates and unit and integrated test plans. Additionally, through single-source, integrated life cycle customer support, enterprises can receive software, implementation services, training, managed hosting and post go-live/ongoing application management support.

“Large and midsize agricultural enterprises are increasingly interested in and requesting state-of-the-art, integrated solutions that can provide risk mitigation and budget control, global best practices, integrity of business processes and information and soil-to-shelf traceability,” said Steve Niesman, itelligence president and CEO. “The full integration of the grower’s field, production, logistics, accounting, planning and control functions in a

real time environment allows these enterprises to become more effective in the management of their compete supply chain with the flexibility to respond to local and global market needs.”

itelligence and CompuNet S.A. already have completed or are in the process of completing myAgri implementations in Columbia and Florida, with plans to expand the offerings throughout Latin America and the U.S. in 2008.

“Growers need affordable solutions that will help them optimize their operations, increase their efficiency and reduce their operational costs on a short time of application,” said Guillermo Lopez CEO of CompuNet S.A. “myAgri was designed in the field and for the field to enable enterprises to benefit by generating added value and increasing their income through new business opportunities and highly developed quality standards of innovation. With myAgri' enterprises in the medium market size can benefit from the same competitive information that large corporations can afford.”
